Close-up of smile

**Submitting all photos is necessary as part of the protocol, however, submitting these two photos is absolutely critical to case acceptance and the best esthetic result.**

## Veneer *Image Protocol*

Before getting started, submit the patient's digital impression, bite registration, and the following pictures to a FirstFit Smile Center, where a specially trained technical team will review and approve the impression.

After approval, you will receive a proposed Smile Design to review with your patient.

### Pro Tips:

- ✓ Patient should be standing up while taking the photos.
- ✓ The patient's photo should be taken with a monochromatic background (i.e. all black or all white).
- ✓ Place a box of gloves behind the patient's neck against the wall to prevent the patient's head from moving.
- ✓ If taking the photos with a cell phone, the phone must be in a vertical position (never horizontal) and should be taken about 3 feet away from the patient.
