

## HOT NEW MINIMALLY INVASIVE PROSTHETICS SYSTEM

### FirstFit Guided Prosthetics Delivery System

**W**hen it comes to preparing teeth to receive veneers, there's the inevitable struggle between creating accurate margins with no gingival extension, while at the same time, eliminating over-reduction and excess tapering. Luckily, there's a solution in the FirstFit Guided Veneers Delivery System, which provides step-by-step guidance through the preparation and placement of up to 10 veneers at one time.

#### See More, Save More

FirstFit is a complete system that includes 3D-printed preparation guides, ready-to-seat veneers in a delivery tray, and case-specific burs. The 3D-printed guides are computer-generated from an impression and then easily positioned over the teeth to provide precise guidance through the preparation. It acts as a step-by-step guide for the FirstFit handpiece—minimizing tooth preparation so that teeth are reshaped to the exact specifications for the veneers.

The all-ceramic veneers are produced using CAD/CAM technology, which ensures a quality fit as well as ideal esthetics and function, while the unique delivery technology provides full visibility of the veneers so that seating, angulation, and margins are perfectly aligned. While the benefits to clinicians are clear, FirstFit offers patients a more comfortable procedure and shortened treatment time—not to mention an esthetic new smile.

### TOP 3 REASONS TO USE FIRSTFIT GUIDED VENEER SYSTEM

- 1 Conserve the maximum healthy tooth structure
- 2 Place up to 10 veneers at one time
- 3 Eliminate temporaries and multiple try-in appointments
